

RONALD AMANCIO

Full Stack Software Engineer | AI Automation & Implementation Specialist

Cebu City, Philippines | (+63) 9913593331 | (+63) 9762804065 | ronsynt@gmail.com

LinkedIn: [linkedin.com/in/ronald-amancio-41404570](https://www.linkedin.com/in/ronald-amancio-41404570)

Portfolio: ronald-amancio.github.io/PortFolio

PROFILE

Full Stack Software Developer with 16 years of experience designing business software solutions, automating workflows, integrating APIs, and translating operational requirements into scalable technology solutions. Experienced in implementing AI-powered chatbot systems, workflow automation platforms, and business process optimization initiatives. Skilled in analyzing business operations, extracting decision logic, designing AI-assisted workflows, and integrating Large Language Models (LLMs) such as GPT-based solutions into real-world applications. Strong ability to bridge the gap between technical implementation and business needs by collaborating with stakeholders, documenting requirements, creating solution blueprints, and delivering customer focused outcomes. Experienced in logistics, ERP, Loans and Financing, HR, Freight Management, customer engagement systems, and AI enhanced business automation.

DATABASE & SQL SERVER EXPERTISE

Platforms: Microsoft SQL Server (MSSQL), Azure SQL Database, MySQL

Development: T-SQL, Stored Procedures, Views, Triggers, Functions, Query Optimization & Indexing Strategies

Performance: Performance Tuning, Execution Plan Analysis, Database Design & Normalization, Capacity-aware Schema Design

Reporting: SQL Server Reporting Services (SSRS), Crystal Reports, Jasper Reports, DevExpress Reports

Data Access: Entity Framework Core, LINQ, ADO.NET, Repository Pattern

Cloud & Ops: Microsoft Azure, CI/CD (GitHub Actions), Backup-aware Application Design, Security & Role-Based Access Control

Testing: Entity Framework Core In-Memory DB Testing, Data Validation, Integration & Regression Testing

Tools: SSMS, Swagger/Postman (API/Data validation), Git, Visual SVN

SUPPORTING FULL-STACK SKILLS

Backend: C#, .Net 8+, ASP.NET Core, ASP.NET MVC, ASP.NET Web API, Web Service, Entity Framework Core, PHP, Java

Frontend: Blazor, React, ExtJS, HTML/CSS/JavaScript, jQuery, Wordpress

Desktop Application Development : WinForms, DevExpress Desktop Components, WPF

Automation & AI: n8n, Make, Prompt Engineering, Workflow Automation, API-driven AI integrations

CORE COMPETENCIES

C#, .NET 8+, ASP.NET Core, ASP.NET WEB FORMS, ASP.NET MVC, RESTful APIs, Blazor, HTML5, CSS3, Bootstrap, JavaScript, jQuery, Bootstrap, Entity Framework Core, LINQ, SQL Server, MySQL, CI/CD, Git, Agile Scrum, SOLID Principles, Dependency Injection, Clean Architecture, Performance Optimization, API Integration, AI Automation (n8n), Workflow Automation.

WORK EXPERIENCE

FullStack Software Engineer | AI Automation Specialist – SharpSuite Corporate Solutions

September 2024 – Present

- Designed, developed, and deployed an enterprise-grade Transport Management System (TMS) using C#, ASP.NET Core (.Net 8), Blazor, SQL Server, and REST APIs.
- Architected a multi-carrier freight quotation platform supporting both API-integrated and rule-based pricing engines using the Factory Design Pattern for scalability and maintainability.
- Developed secure, scalable RESTful APIs integrating multiple third-party logistics providers with resilient error handling, retry mechanisms, and fallback strategies.
- Built an internal CRM and HR Management Portal using ASP.NET Core MVC, featuring employee management, Kanban-style task tracking, role-based permissions, announcements, document management, and performance evaluation modules.
- Implemented secure authentication and authorization using JWT, HTTP Cookies, and Role-Based Access Control (RBAC) across multiple enterprise applications.
- Designed responsive, component-based user interfaces with Blazor and MudBlazor, improving usability and overall user experience.
- Optimized SQL Server database performance through query tuning, indexing strategies, stored procedures, and relational database design.
- Modernized legacy modules through refactoring initiatives that improved scalability, maintainability, and long-term application performance.
- Implemented CI/CD pipelines using GitHub Actions, automating application build, testing, and deployment across multiple environments.
- Collaborated closely with business stakeholders to gather requirements, prioritize enhancements, and deliver technology solutions aligned with operational objectives.

- Participated in Agile development processes including sprint planning, backlog refinement, code reviews, testing, and production deployments.
- Introduced AI-driven workflow automation initiatives that reduced manual effort and improved operational efficiency across customer service and internal business processes.

KEY PROJECTS

Enterprise Transport Management System (Blazor & ASP.NET Core)

- Developed a scalable freight management platform supporting customer quotations, shipment bookings, carrier integrations, and operational workflows.
- Built a flexible multi-carrier quotation engine capable of supporting both API-based integrations and manual pricing computation.
- Designed extensible architecture using SOLID principles and design patterns to simplify onboarding of new logistics providers.
- Integrated multiple third-party logistics APIs for real-time pricing, shipment creation, and tracking services.

HR Management Portal / CRM

- Designed and developed an enterprise HR and CRM platform supporting employee management, recruitment, document management, announcements, task management, and performance evaluations.
- Implemented Kanban-based task management to improve collaboration and productivity across teams.
- Developed comprehensive role-based security and administrative workflows for different user types.
- Built reporting modules, dashboards, and workflow automation to streamline HR operations.

AI Customer Support Platform (WordPress + AI + Automation)

- Designed and implemented an AI-powered customer support chatbot integrated with external logistics APIs to provide real-time shipment tracking, freight quotations, and customer assistance.
- Built conversational AI workflows capable of handling shipment inquiries, customer support requests, lead qualification, pricing assistance, and booking guidance.
- Designed prompt engineering strategies and AI business logic to improve response accuracy and customer experience.
- Automated customer communication through intelligent email workflows, lead capture, and follow-up processes.
- Developed workflow automations using Make.com and n8n to eliminate repetitive manual tasks and improve operational efficiency.
- Designed AI voice automation workflows enabling customers to inquire about shipment status, request freight pricing, and initiate booking processes through conversational interfaces.
- Collaborated with business stakeholders to identify operational bottlenecks and transform manual processes into scalable AI-driven solutions.

FullStack Software Engineer — TritonTek

February 2023–July 2024

- Designed and maintained SQL Server-backed data models for an enterprise HRIS Job Portal supporting online recruitment using Blazor, ASP.NET Core Web API (.NET 6), Entity Framework Core, and SQL Server.
- Developed a C# desktop engineering integration application for U.S.-based clients using DevExpress desktop controls, Entity Framework, MySQL, Repository Pattern, and object-oriented design principles, enabling seamless integration between Tekla Structures and enterprise business systems.
- Designed and maintained rich desktop user interfaces using DevExpress WinForms components, implementing reusable UI components, data binding, validation, reporting, and optimized user workflows.
- Built scalable RESTful APIs and backend services that synchronized engineering and business data with transactional consistency and robust error handling.
- Applied SOLID principles, Repository Pattern, Dependency Injection, asynchronous programming, and Clean Architecture concepts to improve maintainability and scalability.

- Reduced manual engineering data entry through automated synchronization processes, significantly improving operational efficiency and data accuracy.
- Optimized SQL queries and Entity Framework operations for large engineering datasets, improving application responsiveness.
- Analyzed recruitment workflows and implemented automation for applicant intake, notifications, interview scheduling, and candidate status tracking.
- Collaborated with cross-functional teams in an Agile/Scrum environment, participating in sprint planning, backlog refinement, code reviews, and production deployments.

Unit Testing & Quality Assurance

- Performed API endpoint validation using Swagger and Postman.
- Validated Entity Framework Core data operations through integration and regression testing.
- Conducted end-to-end testing of recruitment workflows and engineering integration modules.
- Participated in peer code reviews to improve maintainability and code quality.
- Verified business logic and database integrity before production deployment.
- Collaborated with QA and stakeholders during User Acceptance Testing (UAT).

ERP Systems & Data Support Specialist (FullStack Software Developer) – SkyGo Marketing Corporation

February 2014 – January 2023

- Developed, customized, and maintained enterprise **ERP** applications supporting business operations, inventory, purchasing, sales, and internal workflows using ASP.NET(Web Form), C#, SQL Server, JavaScript (ExtJS Sencha)
- Collaborated with business stakeholders to analyze operational requirements, translate business processes into ERP solutions, and recommend workflow improvements that increased efficiency and reduced manual tasks.
- Maintained and enhanced ERP modules by troubleshooting system issues, implementing new functionality, and ensuring reliable day-to-day operations across multiple departments.
- Designed and optimized SQL queries, stored procedures, database objects, and reporting solutions (SSRS) to improve system performance and provide actionable business insights.
- Built dynamic, component-based user interfaces using ExtJS for complex enterprise workflows, improving usability and operational productivity.
- Integrated frontend applications with backend services, REST APIs, and third-party systems to streamline business processes and improve data consistency.
- Participated in system implementation, testing, user acceptance testing (UAT), deployment, and post-implementation support for enterprise applications.
- Worked closely with end users to identify business requirements, resolve production issues, provide technical support, and deliver continuous system enhancements.
- Developed an **Online Recruitment Examination System** using PHP CodeIgniter 2.1.4 and MySQL to automate candidate assessments and recruitment workflows.
- Developed an internal **Ticketing and Task Management System** using ASP.NET MVC 5 running on .Net Framework 4.7 to improve service request tracking, issue resolution, and employee productivity.
- Produced technical documentation, user guides, and implementation notes to support knowledge transfer, maintenance, and future system enhancements.
- Supported cross-functional teams in delivering scalable ERP and business management solutions while ensuring system reliability, data integrity, and process standardization.

Programmer / Developer – MLhuillier Philippines

October 2012 – January 2014

- Developed the **ML KwartaPadala** (money transfer) - A desktop application using **VisualBasic.NET** with a **SOAP webservice** for data transfer and MySQL as the backing database — a financial system requiring strict data accuracy and consistency.
- Built the companion **ASP.NET Web Forms** online portal, sharing the same **MySQL** data layer.

Programmer — Rameses Systems Inc.

February 2011 – September 2012

- Developed a loan management application using **Java2EE** with a **MySQL** database, including **JasperReports** for financial reporting, deployed on a local **JBoss server**.

IT Technician / Programmer — Smartminds Systems Inc.

April 2010 – December 2010

- Provided technical support and maintenance for servers, workstations, and SQL Server, including troubleshooting and uptime support.
- Promoted to programmer; maintained and enhanced a legacy **Visual Basic (VB6)** application and its SQL Server database.

RELEVANT FREELANCE / INDEPENDENT PROJECTS

• Loan and Financing Application(2017–2018)

Designed and developed a **Windows Desktop Loan & Financing Management System** using **C# (.NET Framework)**, **ADO.NET**, and **SQL Server**, following a **Layered Architecture (Presentation, Business Logic, and Data Access Layers)** to ensure maintainability and separation of concerns.

Key Contributions:

- Designed and normalized the SQL Server database for customer profiles, loan accounts, payment schedules, interest calculations, and financial transactions.
- Developed core loan processing modules including loan applications, approvals, amortization schedules, payment posting, balance tracking, and outstanding loan monitoring.
- Implemented accounting-related functionalities for recording payments, generating financial reports, and maintaining accurate transaction histories.
- Built reusable ADO.NET data access components utilizing parameterized queries, stored procedures, and transaction management for secure and reliable database operations.
- Generated operational and financial reports to support loan management and business decision-making.
- Participated in the complete software development lifecycle, including database design, application development, testing, deployment, and maintenance.

Technologies: C#, .NET Framework, Windows Forms, ADO.NET, SQL Server, Layered Architecture

• Sales & Inventory Reservation System (2021–2023)

Designed and developed a full-stack **Sales & Inventory Reservation System** using **React**, **ASP.NET Core Web API**, and **SQL Server**, providing centralized inventory management, reservation processing, sales transactions, reporting, and role-based access control.

Key Contributions:

- Developed a responsive React frontend integrated with ASP.NET Core RESTful APIs.
- Designed and implemented REST APIs for inventory management, sales processing, reservation workflows, and reporting.
- Built SQL Server database schemas supporting inventory, sales, reservations, customer records, product catalogues, and transaction histories.
- Implemented real-time stock tracking to accurately monitor inventory availability and reservation quantities.
- Developed role-based authentication and authorization to secure application features for administrators and standard users.
- Created sales dashboards and operational reports to provide insights into inventory movement and sales performance.
- Applied clean architecture principles, dependency injection, and service-based design to improve maintainability and scalability.
- Collaborated with stakeholders to gather business requirements, enhance system functionality, and resolve production issues.

Technologies: React, ASP.NET Core Web API, C#, SQL Server, REST APIs, JWT Authentication, Role-Based Authorization

EDUCATION

Bachelor of Science in Information Technology — University of Cebu (2010)
